

Welcome to the Mar 2024 issue of the SafeBoosC newsletter.

SafeBoosC-III follow-up

So far, 54 of 59 sites with eligible children are open for follow-up and 48 have entered data in OpenClinica. In total, 5 sites who have eligible children have not yet started the follow up and 11 sites have been excluded/withdrawn. A total of 1183 eligible infants have reached two years of corrected age. Of these, 801 (67%) infants have completed data entries in OpenClinica so far. The last infant will reach 2 years of corrected age in April 2024. As we are reaching the end of the study, we highly encourage data to be completed as soon as possible. A SOP for data completion strategy in the remaining 6 months will be developed to ensure high data completion when the window closes in Oct 2024. In total, 680 (57%) participants/families have completed the parental questionnaire. For the participants having reached 30 months of corrected age, 81% have enough data for the primary outcome. For an overview of data completion, please see figure 1. For an overview of each sites data completion see table 1.

Figure 1: Overall data completion in the SafeBoosC-III follow up study

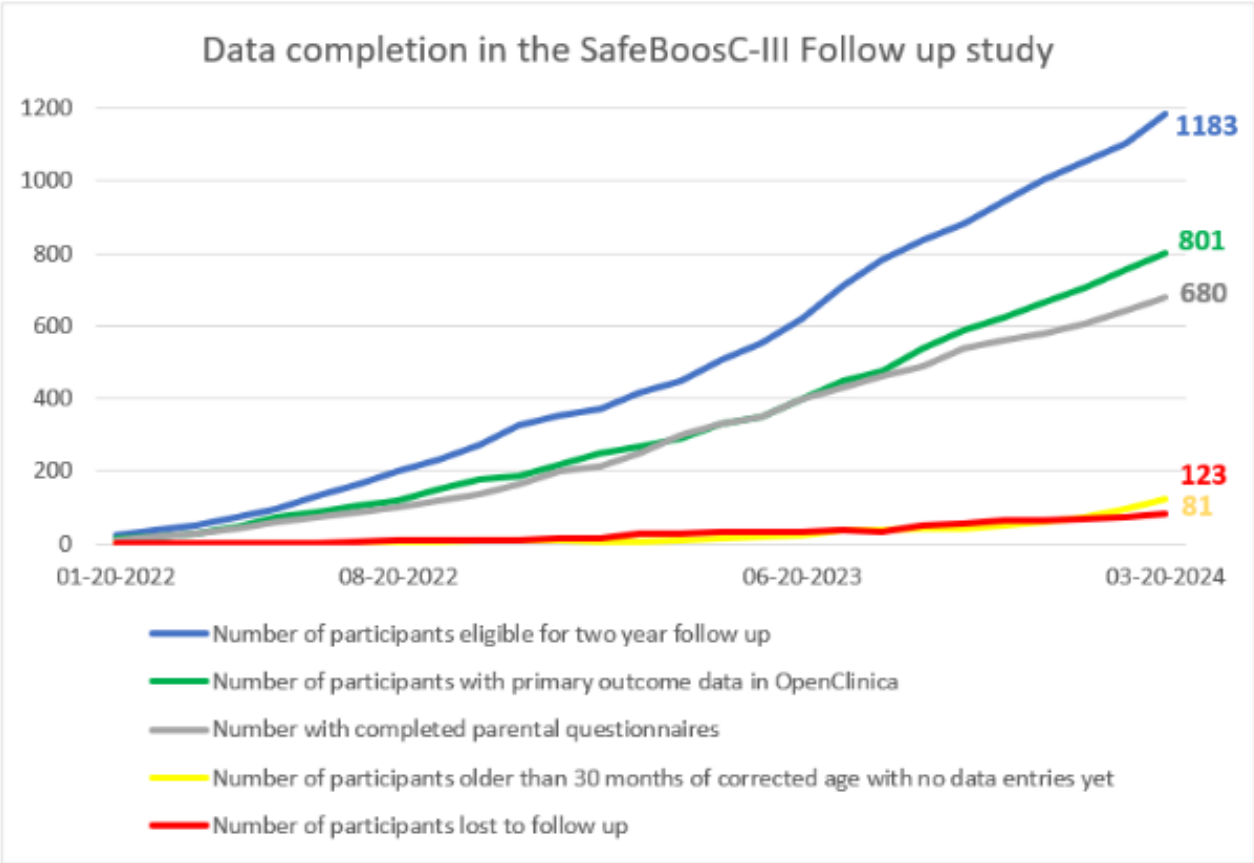

Table 1: Open sites, number of eligible participants for two year follow up and data completion for each site up until the 30th of Mar 2024. Sites highlighted in green indicate that all three tasks (ethics approval, blinding procedure approval and appointment of blinded assessor) have been completed in order to start the follow up study.

Country	Site	Participants eligible for two year follow up	Completed data entries in OpenClinica	Completed parental questionnaires
Austria	University Hospital Graz	15	12	8
Belgium	UZ Leuven	30	29	22
Belgium	Liege Rocourt	21	16	10
Belgium	Grand Hospital de Charleroi	18	11	13
Belgium	AZ St. Jan University Hospital Brugge	10	10	8
