

# SafeBoosC News

Dear All,

July 15<sup>th</sup> patient no. 100 was enrolled. The projection suggests that the last patient will be enrolled in Febr 2014 if we keep the pace. I hope that everybody is pushing on :-)

Most sites are now up and running, although we still wait for Zürich to have their initiation visit. Utrecht says that they can speed up. Cork may have a problem when they initiate the HIP trial. Lena and Uppsala left and it is too late to enroll another Swedish site.

Cork, Utrecht, and Copenhagen offer to do the EEG work.

The OxyPrem was tested in term infants after caesarian section. While the calibration worked fine, there was a noise problem which must be looked into before use in SafeBoosC.

Data Management: When uploading your data via the FTP server please make sure to name the folders as requested, this will save us a lot of time when checking the data.

Here we have had some beautiful summer weeks. I have had some very good local holidays, and now Simon and Anne Mette is off. I hope that you can enjoy some vacation too.

With best wishes from Copenhagen  
Berit and Gorm
